Implement in a very similar way to GovSource:

What is ComplianceTest?

ComplianceTest is an online self-service tool for organisations to test their products or services for compliance to data exchange standards defined by standards issuing authorities.

Issuers: Define compliance test suites for your standards - and host actual test interfaces, avoiding the cost of building and maintaining your own.

Implementers: Quickly find relevant test suites, test your products and services, and register your compliance claims. Discuss issues or problem with others in your community. The quickest and simplest way to achieve confidence in the compliance of your products & services.

<<link to "How it works">>

Why ComplianceTest?

Confidence : Finding and resolving problems early is MUCH cheaper than dealing with failed transactions or upset customers later.

Visibility : One place to find test suites and compliant products & services.

Community : Leverage the knowledge of a community of interest to get help with your implementation.

Support : Engage the help of our experts when you need it.

Cost : Don't want to build and manage your own test harnesses?

<<link to "more reasons">>

ComplianceTest Services

Test Suites : Standards issuers can publish test suites and implementers can search and view the test suites - for free.

Collaboration : Join any standards community (after approval by the issuer) and leverage community forums - for free.

Product Repository : Register your products and/or services and declare compliance with standards. Claims can be un-verified (because you've done testing elsewhere and just want to list your product) or can be verified (requires you to complete a test suite on compliancetest.net). Making a claim is free. Running a test **may** attract a fee.

Test Harness : ComplianceTest offers a dedicated test harness for each version of each standard. Testers can connect to the test harness and work through the test cases until completed - and keep an audit log as evidence of successful completion. Every test suite is available on a monthly subscription basis. In some cases, the monthly subscription is free (because the issuer has paid for the test harness implementation).

<< each of the above should link to the same detailed page as the corresponding white panel on the home page>>

Help and FAQ

How it works : An overview of how ComplianceTest works.

FAQ : Frequently asked questions about ComplianceTest.

Documentation : Formal help documentation on each ComplianceTest services.

Forum : A searchable forum where you can post questions or, if you are a seasoned ComplianceTest user, help others with their questions.

<each of the above links to a dedicated page>

Contact Us

A single link to a contact page that provides our office address (with google map), phone numbers, and a "contact us" web form.

Design Files

PNG files

PNG files containing screen designs are uploaded individually as attachments to this page, and then referenced in the table above. To provide a new design, please:

- Upload the file - sticking to the naming convention you can see in the attachment list
- If it is a new version of an existing file then upload it with a version ID suffix. For example "01_HomePage_Clean.png" becomes "01_HomePage_Clean_v2.png"
- Then update the table above with a reference to the uploaded file and add a few words describing your file.
- If it is a new version of an existing file then keep the old link, add the new link, and describe the changes.

PSD files

The PSD files containing the source for the mockups are located at [User Interface PSD Files](#). These will be converted to html for implementation on Wordpress / Buddypress.

Please manage updates in much the same way - upload each file individually and add a version extension if it is a new version of an existing design.
